Our Story

Custom Stud was the master mind of Marty Kiehm 10 years ago expanding into the light gauge steel framing industry, servicing commercial construction throughout the US. This was a perfect complement to Kiehm Construction's steel building construction company which was founded in 1979 evolving over time from commercial buildings to become the experts in Mini Storage and Airplane Hangar construction.

With his entrepreneurial nature, Mr. Kiehm has taken his building construction in yet another direction, merging his steel building knowledge with the manufacturing expertise of Custom Stud to produce:

- ▶ A transportable (Crane, Small Plane, Truck)
- ▶ Two man assembly
- ▶ No Tools or loose parts
- ▶ Durable small building
- ▶ The Tilt Up Shed

In addition to the Tilt Up Shed, Custom Stud also manufactures steel sided storage sheds and high end ice fishing houses.

Give us a call, ask us your questions and imagine how durable sheds can enhance your business.
